

Foot-and-mouth disease

Information sheet

Nature of the disease

Foot-and-mouth disease (FMD) is a highly contagious viral disease of cloven-hoofed animals. The disease is characterized by the formation of vesicles (fluid-filled blisters) and erosions in the mouth, nose, teats and feet. Although not usually associated with mortality in adult animals, it causes serious production losses and is a major constraint in international trade.

Classification

WOAH Listed disease
<https://www.woah.org/en/diseases/foot-and-mouth-disease/>

Susceptible species

Cloven-hoofed animals (ungulates) are susceptible to FMD. Of the domestic species, cattle, buffaloes, pigs, sheep, goats and deer are susceptible.
